Main Incoming LV Panel Upgrade

The Project:

Comment from RWC: I found QUEST through an online search looking for a company to provide a competitive quote to replace a 2000A LV panel within one of our factories over the Christmas shutdown. QUEST visited site & provided a competitive quotation & indeed we visited QUEST's offices to check all was well prior to placing the order. We were given the opportunity to visit the company that manufactured the LV panel on behalf of QUEST of which we took & were happy with how things were moving along. The LV panel was delivered to site just before the Christmas shutdown ready to be installed. Quest's team arrived bright & early on the 27th December with SSE attending site to power down the main transformer. The old panel was stripped & removed, the new panel installed & reconnected in the allotted time. Quest then attended site on the 2nd January to ensure there were no problems on restart. Quest were a pleasure to work with throughout the project & handled all communication with SSE. They have a fantastic team who goes the extra mile to achieve what the customer wants. I would not hesitate to recommend them & use them again as we already have on another major project that was required to be completed in a short time scale. Quest is now the turn to company for all our major electrical projects.
